Salvador Torré

Breathlessness

for Paetzold

Sub-contrabass recorder in F

or Contrabass recorder in F

or Sub-sub-contrabass recorder in F

notes on the score

The instrument has to be amplified in three points : bottom hole, labium and keys, then mixed and balanced
(If the concert hall is small, it can be played without amplification).

Voice is written in treble clef, but depending on the type of voice, female or male, you sing the octave higher or lower.

in = inhale
out = exhale

in both hands fingers are numbered as follows: thumb (1), index (2), medium (3), ring (4), little finger (5).

2nd. movement :

= sounds parasites due to the disappearance of sound

= pitch bend 1 Fl.: the pitch falls by shortness of breath. Voice: voice down.

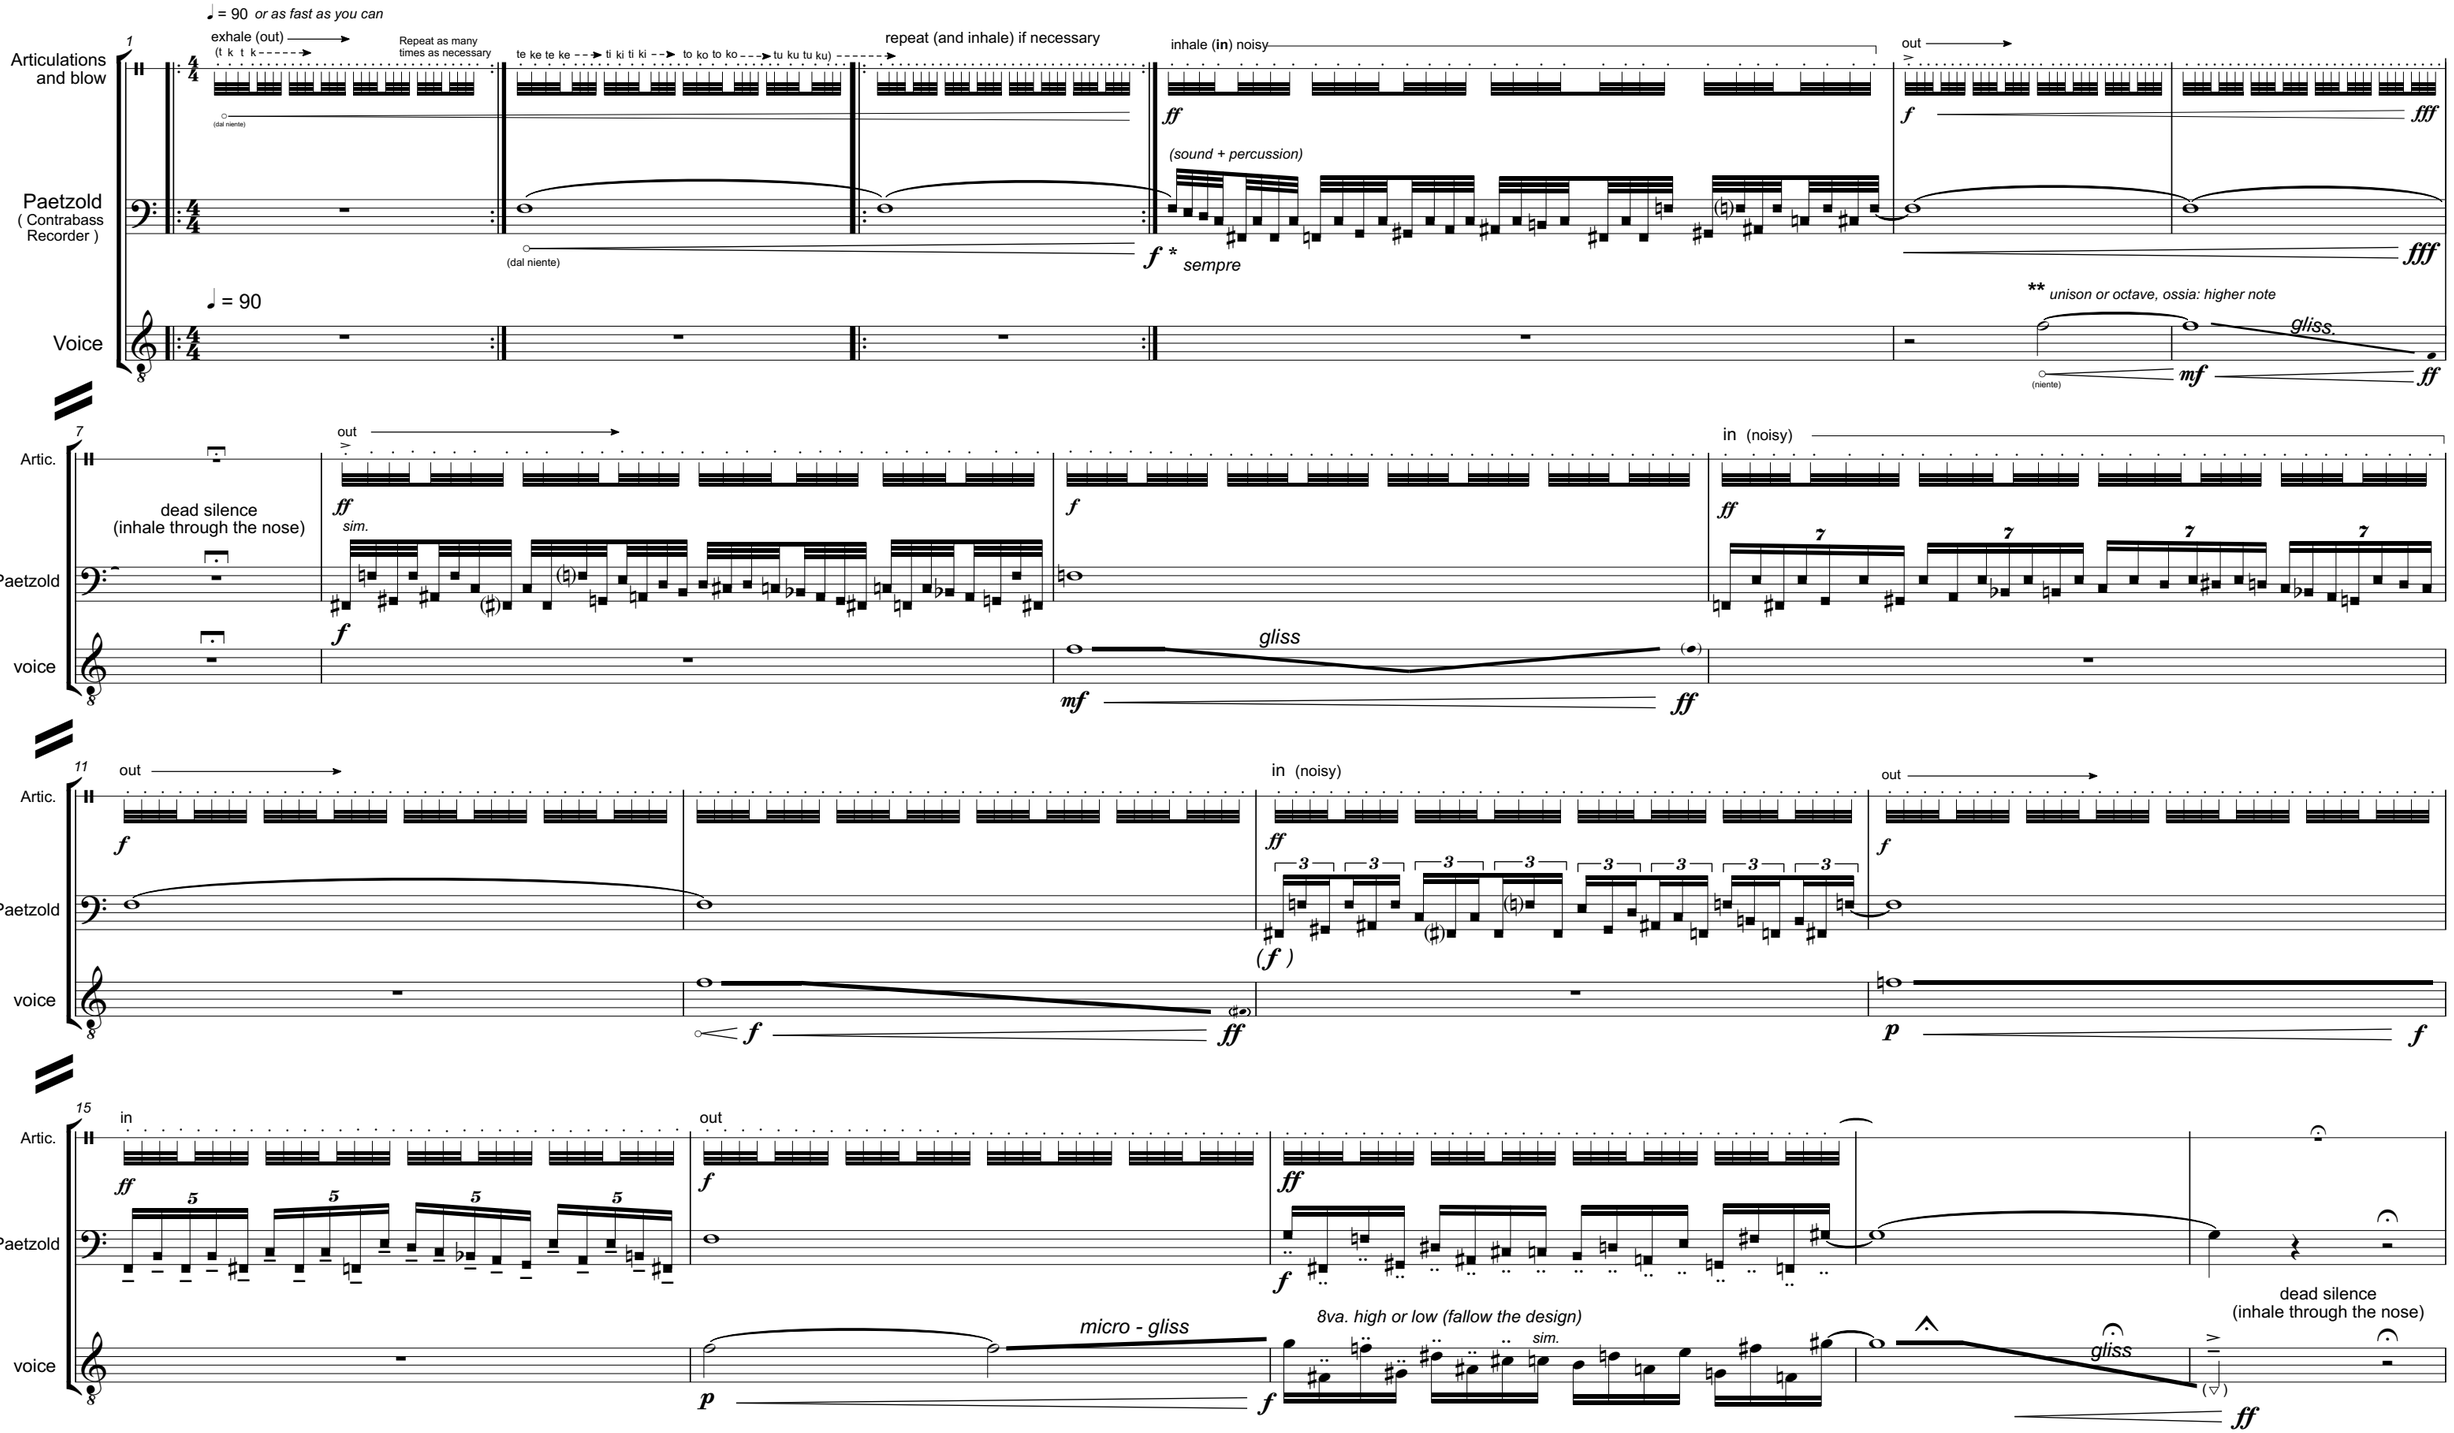
= pitch bend 2 harmonics are generated by shortness of breath

The instrument in its stand, lighted on the center of the stage.
From the distant darkness, you walk approaching the instrument
articulating tongue at the written speed *(ppp-cresc.)*
(please wear rubber shoes or barefoot).

Breathlessness

for Paetzold-Sub-Contrabass Recorder

Salvador Torré



* The indications of dynamics are not necessarily the loudness of the instrument: 1st. they are the intension, *theatrical,* that the instrumentalist should provide, 2nd. the **need to highlight the harmonics** based on written fingerings, 3th. the dynamics can be played with amplification, at the console or at pedal.

** voice is written in treble clef, but depending on type of voice, female or male, you sing the octave higher or lower.
